

24 September 2026

Dear Neighbour,

Since our last engagement in April 2025, Auckland Council and Auckland Transport have continued to work closely together to monitor how Kitchener Street is operating, including traffic performance. A sufficient period of monitoring was important to better understand traffic performance and ensure any final decisions were informed by traffic data, alongside the feedback received from local businesses, residents, property owners, and impacted stakeholders.

Over this period, we have worked to refine and finalise the proposed design. This includes confirming parking, loading and servicing to ensure the design meets Auckland Transport's operational and regulatory requirements. The final line marking design incorporates feedback received through our previous engagement where applicable, while balancing the needs of residents, businesses, loading and servicing requirements.

We are now writing to close the loop on this process and provide an update on the final line marking design. The next phase of work involves implementing the approved line marking and signage changes on Kitchener Street. These works will be delivered by our contractor (JFC). Temporary traffic management will be in place when this work begins.

We appreciate and acknowledge the time taken by all residents, businesses, and property representatives to provide feedback throughout our earlier engagement.

If you have any questions, please contact the project team at midtown@aucklandcouncil.govt.nz or visit the project webpage for the latest updates and information on www.audo.co.nz/projects/te-ha-noa

Ngā mihi,

Auckland Urban Development Office
